

Cyber Risks

Cyber attacks are occurring more frequently and they can have a significant impact on a business. They can cause financial losses, impact the company's reputation in the marketplace, and potentially, lead to litigation.

As the world's premier forensic accounting firm, our global experts are available to immediately respond when a cyber risk related issue occurs.

Our experts will analyze expenses that may be required to repair or replace equipment that was damaged in the breach. Additionally, we can determine what costs pertain to improvements that will be required to enhance systems or plug vulnerabilities. Our professionals are skilled at sifting through vast volumes of data to identify any losses that might have occurred. We are also up-to-date on the latest information and cyber risk policies and procedures.

We offer cyber risk services such as:

- Participating in discussions that may be initiated within hours of the breach
- Determining what geographic regions have been affected by the incident
- Identifying, segregating and classifying any expenses related to the attack
- Examining the company's operational and financial records
- Analyzing industry data such as historical buying habits to determine/measure the effect of the breach on profits
- Comparing projected to actual performance before, during and after the attack
- Examining non-loss-related issues that may have impacted sales in the affected period
- Expert and witness testimony if necessary

For help in arriving at rapid and equitable settlements for cyber risk related claims, hire MDD.
